Quick Start

Thank you for purchasing the MSI® Z390-A PRO motherboard. This Quick Start section provides demonstration diagrams about how to install your computer. Some of the installations also provide video demonstrations. Please link to the URL to watch it with the web browser on your phone or tablet. You may have even link to the URL by scanning the QR code.

Preparing Tools and Components
Installing a Processor

https://youtu.be/4ce91YC3Oww
Installing DDR4 memory

[Diagram showing the installation process]

1. Align the memory module with the slots.
2. Gently press the memory module into the slots until it clicks into place.
3. Ensure the latches are securely closed.

  • 1x VGA port  
  • 1x DVI-D port  
  • 1x DisplayPort  
  • 1x USB 3.1 Gen2 Type-A port  
  • 1x USB 3.1 Gen2 Type-C port  
  • 1x LAN (RJ45) port  
  • 2x USB 3.1 Gen1 Type-A ports  
  • 6x audio jacks |

* The CNVI_1 and JUSB2 share the same bandwidth. Please refer to page 32 for details.
## Internal Connectors

- 1x 24-pin ATX main power connector
- 1x 8-pin ATX 12V power connector
- 1x 6-pin ATX 12V power connector
- 6x SATA 6Gb/s connectors
- 2x M.2 slots (1 M-Key slot, 1 E-Key slot)
- 2x USB 3.1 Gen1 connectors (supports additional 4 USB 3.1 Gen1 ports)
- 2x USB 2.0 connectors (supports additional 4 USB 2.0 ports)
- 1x 4-pin CPU fan connector
- 1x 4-pin Water Pump connector
- 5x 4-pin system fan connectors
- 1x Front panel audio connector
- 2x System panel connectors
- 1x Chassis Intrusion connector
- 1x 4-pin RGB LED connector
- 1x Serial Port connector
- 1x Clear CMOS jumper
- 1x Parallel port connector
- 1x TPM module connector
- 1x thunderbolt Add-on card connector
- 1x Front OC button connector

## I/O Controller

- NUVOTON NCT6797 Controller Chip

## Hardware Monitor

- CPU/System temperature detection
- CPU/System fan speed detection
- CPU/System fan speed control

## Form Factor

- ATX Form Factor
- 12 in. x 9.6 in. (30.5 cm x 24.4 cm)

## BIOS Features

- 1x 128 Mb flash
- UEFI AMI BIOS
- ACPI 6.1, SMBIOS 2.8
- Multi-language

(●: connected, Blank: empty)
Realtek Audio Console

After Realtek Audio Console is installed. You can use it to change sound settings to get better sound experience.

- **Device Selection** - allows you to select a audio output source to change the related options. The check sign indicates the devices as default.

- **Application Enhancement** - the array of options will provide you a complete guidance of anticipated sound effect for both output and input device.

- **Main Volume** - controls the volume or balance the right/left side of the speakers that you plugged in front or rear panel by adjust the bar.

- **Advanced Settings** - provides the mechanism to deal with 2 independent audio streams.

- **Jack Status** - depicts all render and capture devices currently connected with your computer.

- **Connector Settings** - configures the connection settings.

**Auto popup dialog**

When you plug into a device at an audio jack, a dialogue window will pop up asking you which device is current connected.

Each jack corresponds to its default setting as shown on the next page.

⚠️ **Important**

The pictures above for reference only and may vary from the product you purchased.

Introduction to the LGA 1151 CPU

The surface of the LGA 1151 CPU has two notches and a golden triangle to assist in correctly lining up the CPU for motherboard placement. The golden triangle is the Pin 1 indicator.

**Important**

- Always unplug the power cord from the power outlet before installing or removing the CPU.
- Please retain the CPU protective cap after installing the processor. MSI will deal with Return Merchandise Authorization (RMA) requests if only the motherboard comes with the protective cap on the CPU socket.
- When installing a CPU, always remember to install a CPU heatsink. A CPU heatsink is necessary to prevent overheating and maintain system stability.
- Confirm that the CPU heatsink has formed a tight seal with the CPU before booting your system.
- Overheating can seriously damage the CPU and motherboard. Always make sure the cooling fans work properly to protect the CPU from overheating. Be sure to apply an even layer of thermal paste (or thermal tape) between the CPU and the heatsink to enhance heat dissipation.
- Whenever the CPU is not installed, always protect the CPU socket pins by covering the socket with the plastic cap.
- If you purchased a separate CPU and heatsink/cooler, please refer to the documentation in the heatsink/cooler package for more details about installation.
- This motherboard is designed to support overclocking. Before attempting to overclock, please make sure that all other system components can tolerate overclocking. Any attempt to operate beyond product specifications is not recommended. MSI® does not guarantee the damages or risks caused by inadequate operation beyond product specifications.
**DIMM Slots**

**Memory module installation recommendation**

![DIMM Slots Diagram](image1)

**Important**

- Always insert memory modules in the **DIMMA2** slot first.
- Due to chipset resource usage, the available capacity of memory will be a little less than the amount of installed.
- Based on CPU specification, the Memory DIMM voltage below 1.35V is suggested to protect the CPU.
- Please note that the maximum capacity of addressable memory is 4GB or less for 32-bit Windows OS due to the memory address limitation. Therefore, we recommend that you install 64-bit Windows OS if you want to install more than 4GB memory on the motherboard.
- Some memory may operate at a lower frequency than the marked value when overclocking due to the memory frequency operates dependent on its Serial Presence Detect (SPD). Go to BIOS and find the **Memory Try It!** to set the memory frequency if you want to operate the memory at the marked or at a higher frequency.
- It is recommended to use a more efficient memory cooling system for full DIMMs installation or overclocking.
- The stability and compatibility of installed memory module depend on installed CPU and devices when overclocking.
**Overview of Components**

### PCI_E1~6: PCIe Expansion Slots

- **PCI_E1**: PCIe 3.0 x16 (CPU lanes)
- **PCI_E2**: PCIe 3.0 x1 (PCH lanes)
- **PCI_E3**: PCIe 3.0 x1 (PCH lanes)
- **PCI_E4**: PCIe 3.0 x4 (PCH lanes)
- **PCI_E5**: PCIe 3.0 x1 (PCH lanes)
- **PCI_E6**: PCIe 3.0 x1 (PCH lanes)

**Important**
- If you install a large and heavy graphics card, you need to use a tool such as **MSI Gaming Series Graphics Card Bolster** to support its weight and to prevent deformation of the slot.
- For a single PCIe x16 expansion card installation with optimum performance, using the **PCI_E1** slot is recommended.
- When adding or removing expansion cards, always turn off the power supply and unplug the power supply power cable from the power outlet. Read the expansion card’s documentation to check for any necessary additional hardware or software changes.

### SATA1~6: SATA 6Gb/s Connectors

These connectors are SATA 6Gb/s interface ports. Each connector can connect to one SATA device.

**Important**
- Please do not fold the SATA cable at a 90-degree angle. Data loss may result during transmission otherwise.
- SATA cables have identical plugs on either sides of the cable. However, it is recommended that the flat connector be connected to the motherboard for space saving purposes.
- The SATA2 will be unavailable when installing M.2 SATA device into M.2 slot.
M2_1: M.2 Slot (Key M)

⚠️ Important
- Intel® RST only supports PCIe M.2 SSD with UEFI ROM.
- Intel® Optane™ Memory Ready.

Installing M.2 device
1. Loosen the M.2 riser screw from the motherboard.
2. Move and fasten the M.2 riser screw to the appropriate location for your M.2 SSD.
3. Insert your M.2 SSD into the M.2 slot at a 30-degree angle.
4. Secure the M.2 SSD in place with the supplied M.2 screw.

JTPM1: TPM Module Connector
This connector is for TPM (Trusted Platform Module). Please refer to the TPM security platform manual for more details and usages.

**Important**

Make sure that all the power cables are securely connected to a proper ATX power supply to ensure stable operation of the motherboard.
JUSB3~4: USB 3.1 Gen1 Connectors

These connectors allow you to connect USB 3.1 Gen1 ports on the front panel.

</table>

⚠️ **Important**

Note that the Power and Ground pins must be connected correctly to avoid possible damage.

**Charger Port**

The JUSB4 connector is a charger port which can increase USB power output for fast charging your smartphone or USB-powered devices. The Charger Port is hardware controlled by motherboard chip, it can still charge your device in suspend, hibernate state or even shutdown states. However, when you boot the computer into Windows®, you will need to install the MSI Dragon Center application to turn ON/OFF the Charging mode.

⚠️ **Important**

When the Charging mode is enabled, the Charger Port data syncing will be disabled.
JUSB1~2: USB 2.0 Connectors

These connectors allow you to connect USB 2.0 ports on the front panel.

![USB 2.0 Connectors](image)

Note: For JUSB2, the set of pins is unavailable when an Intel wireless-AC (CNVI) module is installed in the CNVI_1 slot.
CPU_FAN1, PUMP_FAN1, SYS_FAN1~5: Fan Connectors

Fan connectors can be classified as PWM (Pulse Width Modulation) Mode or DC Mode. PWM Mode fan connectors provide constant 12V output and adjust fan speed with speed control signal. DC Mode fan connectors control fan speed by changing voltage. This motherboard can automatically detect PWM and DC mode. However, you can follow the instruction below to adjust the fan connector to PWM or DC Mode manually.

Switching fan mode and adjusting fan speed

You can switch between PWM mode and DC mode and adjust fan speed in BIOS > HARDWARE MONITOR.

Select PWM mode or DC mode

There are gradient points of the fan speed that allow you to adjust fan speed in relation to CPU temperature.

⚠️ Important

Make sure fans are working properly after switching the PWM/DC mode.

**JCI1: Chassis Intrusion Connector**
This connector allows you to connect the chassis intrusion switch cable.

- **Normal (default)**
- **Trigger the chassis intrusion event**

**Using chassis intrusion detector**
1. Connect the JCI1 connector to the chassis intrusion switch/sensor on the chassis.
2. Close the chassis cover.
3. Go to BIOS > SETTINGS > Security > Chassis Intrusion Configuration.
4. Set Chassis Intrusion to Enabled.
5. Press F10 to save and exit and then press the Enter key to select Yes.
6. Once the chassis cover is opened again, a warning message will be displayed on screen when the computer is turned on.

**Resetting the chassis intrusion warning**
1. Go to BIOS > SETTINGS > Security > Chassis Intrusion Configuration.
2. Set Chassis Intrusion to Reset.
3. Press F10 to save and exit and then press the Enter key to select Yes.
JBAT1: Clear CMOS (Reset BIOS) Jumper

There is CMOS memory onboard that is external powered from a battery located on the motherboard to save system configuration data. If you want to clear the system configuration, set the jumpers to clear the CMOS memory.

**Resetting BIOS to default values**

1. Power off the computer and unplug the power cord.
2. Use a jumper cap to short JBAT1 for about 5-10 seconds.
3. Remove the jumper cap from JBAT1.
4. Plug the power cord and Power on the computer.

JOC1: Front OC Button Connector

This connector allows you to connect the OC button on the front panel of case. You can click on the OC button for easy overclocking.

<table>

**JRGB1: RGB LED connector**

The JRGB1 connector allows you to connect the 5050 RGB LED strips 12V.

![JRGB1 Diagram]

**Important**
- The JRGB1 connector supports 5050 RGB LED strip (12V/G/R/B) with the maximum power rating of 3A (12V).
- Please keep the LED strip shorter than 2 meters to prevent dimming.
- Always turn off the power supply and unplug the power cord from the power outlet before installing or removing the LED strip.
- Please use MSI’s software to control the extended LED strip.

**EZ Debug LED**

These LEDs indicate the debug status of the motherboard.

- **CPU** - indicates CPU is not detected or fail.
- **DRAM** - indicates DRAM is not detected or fail.
- **VGA** - indicates GPU is not detected or fail.
- **BOOT** - indicates the booting device is not detected or fail.
Installing OS, Drivers & Utilities

Please download and update the latest utilities and drivers at www.msi.com

Installing Windows® 10
1. Power on the computer.
2. Insert the Windows® 10 installation disc/USB into your computer.
3. Press the Restart button on the computer case.
4. Press F11 key during the computer POST (Power-On Self Test) to get into Boot Menu.
5. Select the Windows® 10 installation disc/USB from the Boot Menu.
6. Press any key when screen shows Press any key to boot from CD or DVD... message.
7. Follow the instructions on the screen to install Windows® 10.

Installing Drivers
1. Start up your computer in Windows® 10.
2. Insert MSI® Driver Disc into your optical drive.
3. Click the Select to choose what happens with this disc pop-up notification, then select Run DVDSsetup.exe to open the installer. If you turn off the AutoPlay feature from the Windows Control Panel, you can still manually execute the DVDSsetup.exe from the root path of the MSI Driver Disc.
4. The installer will find and list all necessary drivers in the Drivers/Software tab.
5. Click the Install button in the lower-right corner of the window.
6. The drivers installation will then be in progress, after it has finished it will prompt you to restart.
7. Click OK button to finish.
8. Restart your computer.

Installing Utilities
Before you install utilities, you must complete drivers installation.
1. Open the installer as described above.
2. Click the Utilities tab.
3. Select the utilities you want to install.
4. Click the Install button in the lower-right corner of the window.
5. The utilities installation will then be in progress, after it has finished it will prompt you to restart.
6. Click OK button to finish.
7. Restart your computer.
MYSTIC LIGHT

MYSTIC LIGHT is an application that allows you to control LED light effects of MSI & partner products. For some earlier products, you can go to product download page to download the applicable LED control software.

Device LED effect control screen

When you start up MYSTIC LIGHT, there will be a list of auto-detected devices on the top of the screen. You can click the device icon to switch control screen between devices from the list and you can synchronize their LED effects.

To change LED effect, select the device and LED area you wish, and then select a LED effect from on the left column.

- **Light effect selector** - allow you to select LED light effects. Please note that for light effect, the option would be more or less depending on the devices you have, it will only list the light effects which are available for all included devices. Each page of effect selector lists six effects, you can use the page navigation on the bottom to find more options.

- **LED Color selector** - In this section, you may select the color for single light effects (Stack, Breathing, Flashing etc.).

There are four custom color slots on the outer arc and six unchangeable default colors on the inner arc. You can simply change LED color by clicking a color on the outer or inner arc. To change the custom colors, click one of the color slots on the outer arc to store the color of your choice.

Then use the Hue Circle to choose the color you want. The color you choose will be displayed on the center circle. Drag the brightness slider up to increase brightness or drag down to decrease brightness.

You can specify a color by editing an RGB (red, green, blue) value between 0 and 255.
• **LED area selector** - allows you to select the LED area on the device. The LED effects vary depending on your LED area selection.

• **Effect speed level** - allows you to adjust the LED light effect switching speed. Please note that this function will only be available if your device supports it.

![Effect speed level](image)

Select more dots to increase the rate of change of the effect and fewer dots to decrease the speed.

• **Brightness level** - allows you to adjust LED light brightness. Please note that this function will only be available if your device supports it.

![Brightness level](image)

Select more dots to increase the LED brightness and fewer dots to decrease the LED brightness.

• **Apply Button** - Each time you change the configurations, you need to click the **Apply** button to apply changes.

![Apply Button](image)

• **Device synchronization** - In this section, you may synchronize LED light effect to your devices.

  • **To synchronize devices** - click the chain icon under device icon, when the broken-chain icon changes to the red-chain icon, the device has synchronized the LED effect settings with the other devices.

![Device synchronization](image)

**Red-chain icon** - indicates the device has been synchronized.  
**Broken-chain icon** - indicates the device is not synchronized.

• **Individual** - You can also change settings for single device. To do that, click the chain icon and turn the color to gray as below.

![Individual](image)

**Device icon** - click it to enter the device LED effect setting screen. When it is turn red, it indicates the device you’re currently setting.
• **Synchronize all** - There is a quick button on the upper right that allows you to synchronize all your devices with one click. Click the All Sync button, then the chain icons under all sync devices will be changed in red-chain icons and the Profile control panel will appear on the left.

• **Profile control panel** - used to save All Sync profile settings.

- **Profile name** - allows you to edit the Profile name.
- **Create button** - create a new Profile setting.
- **Delete button** - delete the Profile setting.
- **Apply button** - apply the Profile setting.
- **Save button** - saves sync device settings and lighting effect settings to the current Sync Profile.
BIOS Setup

The default settings offer the optimal performance for system stability in normal conditions. You should **always keep the default settings** to avoid possible system damage or failure booting unless you are familiar with BIOS.

⚠️ **Important**

- BIOS items are continuously update for better system performance. Therefore, the description may be slightly different from the latest BIOS and should be for reference only. You could also refer to the HELP information panel for BIOS item description.
- The pictures in this chapter are for reference only and may vary from the product you purchased.

Entering BIOS Setup

Please refer the following methods to enter BIOS setup.

- Press **Delete** key, when the **Press DEL key to enter Setup Menu, F11 to enter Boot Menu** message appears on the screen during the boot process.
- In MSI Dragon Center application, click on **GO2BIOS** button and choose **OK**. The system will reboot and enter BIOS setup directly.

Function key

F1: General Help
F2: Add/ Remove a favorite item
F3: Enter Favorites menu
F4: Enter CPU Specifications menu
F5: Enter Memory-Z menu
F6: Load optimized defaults
F7: Switch between Advanced mode and EZ mode
F8: Load Overclocking Profile
F9: Save Overclocking Profile
F10: Save Change and Reset*
F12: Take a screenshot and save it to USB flash drive (FAT/ FAT32 format only).

Ctrl+F: Enter Search page

* When you press F10, a confirmation window appears and it provides the modification information. Select between Yes or No to confirm your choice.
Resetting BIOS

You might need to restore the default BIOS setting to solve certain problems. There are several ways to reset BIOS:

• Go to BIOS and press F6 to load optimized defaults.
• Short the Clear CMOS jumper on the motherboard.

⚠️ Important

Be sure the computer is off before clearing CMOS data. Please refer to the Clear CMOS jumper section for resetting BIOS.

Updating BIOS

Updating BIOS with M-FLASH

Before updating:

Please download the latest BIOS file that matches your motherboard model from MSI website. And then save the BIOS file into the USB flash drive.

Updating BIOS:

1. Insert the USB flash drive that contains the update file into the USB port.
2. Please refer the following methods to enter flash mode.
   • Reboot and press Ctrl + F5 key during POST and click on Yes to reboot the system.
   • Reboot and press Del key during POST to enter BIOS. Click the M-FLASH button and click on Yes to reboot the system.
3. Select a BIOS file to perform the BIOS update process.
4. After the flashing process is 100% completed, the system will reboot automatically.

Updating the BIOS with MSI Dragon Center

Before updating:

Make sure the LAN driver is already installed and the Internet connection is set properly.

Updating BIOS:

1. Install and launch MSI Dragon Center.
2. Select BIOS Update.
3. Click on Scan button.
4. Click on Download icon to download and install the latest BIOS file.
5. Click Next and choose In Windows mode. And then click Next and Start to start updating BIOS.
6. After the flashing process is 100% completed, the system will restart automatically.
EZ Mode

At EZ mode, it provides the basic system information and allows you to configure the basic setting. To configure the advanced BIOS settings, please enter the Advanced Mode by pressing the Setup Mode switch or F7 function key.

**OC GENIE 4 switch** - click on it to toggle the OC GENIE 4 for OC.

**XMP switch** - click on the inner circle to enable/disable the X.M.P. (Extreme Memory Profile). Switch the outer circle to select the X.M.P. profile. This switch will only be available if the X.M.P. supported memory module is installed.

**Setup Mode switch** - press this tab or the F7 key to switch between Advanced mode and EZ mode.

**Screenshot** - click on this tab or the F12 key to take a screenshot and save it to USB flash drive (FAT/ FAT32 format only).

**Search** - click on this tab or the Ctrl+F keys and the search page will show. It allows you to search BIOS item by key word. Move the mouse over a blank space and right click the mouse to exit search page.

⚠️ **Important**

_in search page, only the F6, F10 and F12 function keys are available._

**Language** - allows you to select the language of BIOS setup.

**System information** - shows the CPU/DDR speed, CPU/MB temperature, MB/CPU type, memory size, CPU/DDR voltage, BIOS version and build date.

**Boot device priority bar** - you can move the device icons to change the boot priority. The boot priority from high to low is left to right.
• **Information display** - click on the **CPU**, **Memory**, **Storage**, **Fan Info** and **Help** buttons on left side to display related information.

• **Function buttons** - enable or disable the **LAN Option ROM**, **M.2/ Optane Genie**, **HD audio controller**, **AHCI/ RAID**, **CPU Fan Fail Warning Control** and **BIOS Log Review** by clicking on their respective button.

• **M-Flash** - click on this button to perform **M-Flash** function that provides the way to update BIOS with a USB flash drive.

• **Hardware Monitor** - click on this button to display the **Hardware Monitor** menu that allows you to manually control the fan speed by percentage.

• **Favorites menu** - press the **F3** key to enter **Favorites** menu. It allows you to create personal BIOS menu where you can save and access favorite/ frequently-used BIOS setting items.

  • **Default HomePage** - allows you to select a BIOS menu (e.g. SETTINGS, OC...,etc) as the BIOS home page.

  • **Favorite1~5 page** - allows you to add the frequently-used/ favorite BIOS setting items in one page.

  • **To add a BIOS item to a favorite page (Favorite 1~5)**

    1. Move the mouse over a BIOS item not only on BIOS menu but also on search page.

    2. Right-click or press **F2** key.

    3. Choose a favorite page and click on **OK**.

  • **To delete a BIOS item from favorite page**

    1. Move the mouse over a BIOS item on favorite page (Favorite 1~5)

    2. Right-click or press **F2** key.

    3. Choose **Delete** and click on **OK**.
Advanced Mode

Press **Setup Mode switch** or **F7** function key can switch between EZ Mode and Advanced Mode in BIOS setup.

- **OC GENIE 4 switch/ XMP switch/ Setup Mode switch/ Screenshot/ Language/ Search/ System information/ Boot device priority bar** - please refer to the descriptions of EZ Mode Overview section.

- **BIOS menu selection** - the following options are available:
  - **SETTINGS** - allows you to specify the parameters for chipset and boot devices.
  - **OC** - allows you to adjust the frequency and voltage. Increasing the frequency may get better performance.
  - **M-FLASH** - provides the way to update BIOS with a USB flash drive.
  - **OC PROFILE** - allows you to manage overclocking profiles.
  - **HARDWARE MONITOR** - allows you to set the speeds of fans and monitor voltages of system.
  - **BOARD EXPLORER** - provides the information of installed devices on this motherboard.

- **Menu display** - provides BIOS setting items and information to be configured.
System Status

▶ System Date
Sets the system date. Use tab key to switch between date elements.

The format is <day> <month> <date> <year>.

<day> Day of the week, from Sun to Sat, determined by BIOS. Read-only.
<month> The month from Jan. through Dec.
<date> The date from 1 to 31 can be keyed by numeric function keys.
<year> The year can be adjusted by users.

▶ System Time
Sets the system time. Use tab key to switch between time elements.

The time format is <hour> <minute> <second>.

▶ SATA PortX/ M2_X
Shows the information of connected SATA/ M.2 devices.

⚠️ Important
If the connected SATA device is not displayed, turn off computer and re-check SATA cable and power cable connections of the device and motherboard.

▶ System Information
Shows detailed system information, including CPU type, BIOS version, and Memory (read only).

▶ DMI Information
Shows system information, desktop Board Information and chassis Information. (Read only).

Advanced

▶ PCI Subsystem Settings
Sets PCI, PCI express interface protocol and latency timer. Press Enter to enter the sub-menu.
**PEG X - Max Link Speed [Auto]**
Sets PCI Express protocol of PCIe x16 slots for matching different installed devices.

- [Auto] This item will be configured automatically by BIOS.
- [Gen1] Enables PCIe Gen1 support only.
- [Gen2] Enables PCIe Gen2 support only.
- [Gen3] Enables PCIe Gen3 support only.

**PCI Latency Timer [32]**
Sets latency timer of PCI interface device.

- [Options: 32, 64, 96, 128, 160, 192, 224, 248 PCI Bus clocks]

**Above 4G memory/ Crypto Currency mining [Disabled]**
Enables or disables 64-bit capable devices to be decoded in above 4G address space. It is only available if the system supports 64-bit PCI decoding.

- [Enabled] Allows you to utilize more than 4x GPUs.
- [Disabled] Disables this function.

**ACPI Settings**
Sets ACPI parameters of onboard power LED behaviors. Press Enter to enter the sub-menu.

- **Power LED [Blinking]**
  Sets shining behaviors of the onboard Power LED.
  - [Dual Color] The power LED turns to another color to indicate the S3 state.
  - [Blinking] The power LED blinks to indicate the S3 state.

- **CPU Over Temperature Alert [Auto]**
  Enables or disables the CPU overheating alert when CPU temperature is over 80 degrees centigrade.

**Integrated Peripherals**
Sets integrated peripherals’ parameters, such as LAN, HDD, USB and audio. Press Enter to enter the sub-menu.

- **Onboard LAN Controller [Enabled]**
  Enables or disables the onboard LAN controller.

- **LAN Option ROM [Disabled]**
  Enables or disables the legacy network Boot Option ROM for detailed settings. This item will appear when Onboard LAN Controller is enabled.
  - [Enabled] Enables the onboard LAN Boot ROM.
  - [Disabled] Disables the onboard LAN Boot ROM.

- **Network Stack [Disabled]**
  Sets UEFI network stack for optimizing IPv4 / IPv6 function.
  - [Enabled] Enables UEFI network stack.
  - [Disabled] Disables UEFI network stack.
► Ipv4 PXE Support [Enabled]
When Enabled, the system UEFI network stack will support Ipv4 protocol. This item will appear when Network Stack is enabled.
[Enabled] Enables the Ipv4 PXE boot support.
[Disabled] Disables the Ipv4 PXE boot support.

► Ipv6 PXE Support [Enabled]
When Enabled, the system UEFI network stack will support Ipv6 protocol. This item will appear when Network Stack is enabled.
[Enabled] Enables the Ipv6 PXE boot support.
[Disabled] Disables the Ipv6 PXE boot support.

► SATA Mode [AHCI Mode]
Sets the operation mode of the onboard SATA controller.
[AHCI Mode] Specify the AHCI mode for SATA storage devices. AHCI (Advanced Host Controller Interface) offers some advanced features to enhance the speed and performance of SATA storage device, such as Native Command Queuing (NCQ) and hot-plugging.
[RAID/ Optane Mode] Enables RAID function for SATA storage devices or enables Optane function for NVMe or PCIe storage devices.

► M2_1-RST Pcie Storage Remapping [Disabled]
Enables or disables Intel Rapid Storage for M.2 PCIe storage device.

► M.2/Optane Genie [Disabled]
Enables or disables M.2 storage/ Optane memory. M.2 Genie provides a convenient way for setting up M.2 device. When set to Enabled, it will support Intel Optane memory when it is installed and support RAID function when 2 or more M.2 devices are installed.

► SATAx Hot Plug [Disabled]
Allows user to enable or disable the SATA hot plug support.
[Enabled] Enables hot plug support for the SATA ports.
[Disabled] Disables hot plug support for the SATA ports.

► HD Audio Controller [Enabled]
Enables or disables the onboard High Definition Audio controller.

► Integrated Graphics Configuration
Adjusts integrated graphics settings for optimum system. Press Enter to enter the sub-menu.

► Initiate Graphic Adapter [PEG]
Selects a graphics device as the primary boot device.
[IGD] Integrated Graphics Display.

► Integrated Graphics Share Memory [64M]
Selects a fixed amount of system memory allocated to the onboard graphics. This item will appear when IGD Multi-Monitor is enabled.
IGD Multi-Monitor [Disabled]
Enables or disables the multi-screen output from integrated graphics and external graphics card. This item appears when Initiate Graphic Adapter set to PEG.
[Enabled] Enables multi-screen function for both integrated and external graphics cards.
[Disabled] Disables this function.

Intel (R) Thunderbolt
Sets the thunderbolt device function. Press Enter to enter the sub-menu.

Discrete Thunderbolt(TM) Support [Disabled]
Enables or disables the thunderbolt I/O devcie support.

USB Configuration
Sets the onboard USB controller and device function. Press Enter to enter the sub-menu.

USB Controller [Enabled]
Enables or disables all USB controller.

XHCI Hand-off [Diasbled]
Enables or disables XHCI hand-off support for the operating system without XHCI hand-off feature.

Legacy USB Support [Enabled]
Sets Legacy USB function support.
[Auto] The system will automatically detect if any USB device is connected and enable the legacy USB support.
[Enabled] Enable the USB support under legacy mode.
[Disabled] The USB devices will be unavailable under legacy mode.

Super IO Configuration
Sets system Super I/O chip parameters including COM ports. Press Enter to enter the sub-menu.

Serial (COM) Port 0 Configuration
Sets detailed configuration of serial(COM) port. Press Enter to enter the sub-menu.

Serial (COM) Port 0 [Enabled]
Enables or disables serial port.

Serial (COM) Port 0 Settings [Auto]
Sets serial port. If set to Auto, BIOS will optimize the IRQ automatically or you can set it manually.

Parallel (LPT) Port Configuration
Sets detailed configuration of parallel port (LPT). Press Enter to enter the sub-menu.

Parallel (LPT) Port [Enabled]
Enables or disables parallel(LPT) port.

**Parallel (LPT) Port Settings [Auto]**
Sets parallel port (LPT). If set to Auto, BIOS will optimize the IRQ automatically or you can set it manually.

**Device Mode [STD Printer Mode]**
Selects an operating mode for parallel port.

- **STD Printer Mode** Printer port mode
- **SPP** Standard Parallel Port mode
- **EPP-1.9/1.7 + SPP** Enhanced Parallel Port-1.9/1.7 mode + Standard Parallel Port mode.
- **ECP** Extended Capability Port mode
- **ECP + EPP-1.9/1.7** Extended Capability Port mode + Enhanced Parallel Port-1.9/1.7 mode.

**Power Management Setup**
Sets system Power Management of ErP and AC Power Loss behaviors. Press Enter to enter the sub-menu.

**ErP Ready [Disabled]**
Enables or disables the system power consumption according to ErP regulation.

- **Enabled** Optimize the system power consumption according to ErP regulation. It will not support S4 & S5 wake up by USB, PCI and PCIe devices.
- **Disabled** Disables this function.

**Restore after AC Power Loss [Power Off]**
Sets the system behaviors while encountering the AC power loss.

- **Power Off** Leaves the system in power off state after restoring AC power.
- **Power On** Boot up the system after restoring AC power.
- **Last State** Restores the system to the previous state (power on/ power off) before AC power loss.

**System Power Fault Protection [Disabled]**
Enables or disables the system to boot up when detecting abnormal voltage input.

- **Enabled** Protect the system from unexpected power operation and remain the shut down status.
- **Disabled** Disables this function.

**USB Standby Power at S3/S4/S5 [Disabled]**
Enables or disables the standby power for all USB ports. This item will be available when Resume By USB Device is Disabled.

**Windows OS Configuration**
Sets Windows OS detailed configuration and behaviors. Press Enter to enter the sub-menu.
► Windows 10 WHQL Support [Disabled]
Enables the supports for Windows 10 or disables for other operating systems. Before enabling this item, make sure all installed devices & utilities (hardware & software) should meet the Windows 10 requirements.
[Enabled] The system will switch to UEFI mode to meet the Windows requirement.
[Disabled] Disables this function.

► MSI Fast Boot [Disabled]
MSI Fast Boot is the fastest way to boot the system. It will disable more devices to speed up system boot time which is faster than the boot time of Fast Boot.
[Enabled] Enables the MSI Fast Boot function to speed up booting time. And the following Fast Boot field will be disabled and fixed.
[Disabled] Disables MSI Fast Boot.

⚠️ Important
When MSI Fast Boot is enabled, you can use MSI FAST BOOT application to enter BIOS setup if needed. Please refer Entering BIOS Setup section for details.

► Fast Boot [Enabled]
Enables or disables the fast boot feature for Windows 10. This item will only be available when MSI Fast Boot is disabled.
[Enabled] Enables the Fast Boot configuration to accelerate system boot time.
[Disabled] Disables the Fast Boot configuration.

► Internal GOP Configuration
Manages the onboard Graphics Output Protocol (GOP). Press Enter to enter the sub-menu. This sub-menu will appear when Windows 10 WHQL Support is enabled.

► Secure Boot
Sets the Windows secure boot to prevent the unauthorized accessing. Press Enter to enter the sub-menu. This sub-menu will appear when Windows 10 WHQL Support is enabled.

► Secure Boot Support [Disabled]
Enables or disables secure boot support.
[Enabled] Enables the secure boot function and allow you to set the secure boot settings.
[Disabled] Disables this function.

► Secure Boot Mode [Standard]
Selects the secure boot mode. This item is to select how the secure boot keys be loaded. This item appears when Secure Boot Support is enabled.
[Standard] The system will automatically load the secure keys from BIOS.
[Custom] Allows user to configure the secure boot settings and manually load the secure keys.

► Key Management
Manages the secure boot keys. Press <Enter> to enter the sub-menu. This sub-menu will appear when Secure Boot Mode sets to Custom.
Wake Up Event Setup
Sets system wake up behaviors for different sleep modes. Press Enter to enter the sub-menu.

Wake Up Event By [BIOS]
Selects the wake up event by BIOS or operating system.
[BIOS] Activates the following items, set wake up events of these items.
[OS] The wake up events will be defined by OS.

Resume By RTC Alarm [Disabled]
Disables or enables the system wake up by RTC Alarm.
[Enabled] Enables the system to boot up on a scheduled time/ date.
[Disabled] Disables this function.

Date (of month) Alarm/ Time (hh:mm:ss) Alarm
Sets RTC alarm date/ Time. If Resume By RTC Alarm is set to [Enabled], the system will automatically resume (boot up) on a specified date/hour/minute/second in these fields (using the + and - keys to select the date & time settings).

Resume By PCI-E Device [Disabled]
Enables or disables the wake up function of installed PCI-E expansion cards, integrated LAN controllers or USB devices which are supported by third party integrated chips.
[Enabled] Enables the system to be awakened from the power saving modes when activity or input signal of PCIe device is detected.
[Disabled] Disables this function.

Resume By Onboard Intel LAN [Disabled]
Enables or disables the system wake up by Onboard Intel LAN.
[Enabled] Enables the system to be awakened from the power saving modes when activity or input signal of Intel LAN device is detected.
[Disabled] Disables this function.

Resume by USB Device [Disabled]
Enables or disables the system wake up by USB devices.
[Enabled] Enables the system to be awakened from sleep state when activity of USB device is detected.
[Disabled] Disables this function.

Resume From S3/S4/S5 by PS/2 Mouse [Disabled]
Enables or disables the system wake up by PS/2 mouse.
[Enabled] Enables the system to be awakened from S3/ S4/ S5 state when activity of PS/2 mouse is detected.
[Disabled] Disables this function.

Resume From S3/S4/S5 by PS/2 Keyboard [Disabled]
Enables or disables the system wake up by PS/2 keyboard.
[Any Key] Enables the system to be awakened from S3/ S4/ S5 state when activity of any key on PS/2 keyboard is detected.
[Hot Key] Enables the system to be awakened from S3/ S4/ S5 state when activity of hot key on PS/2 keyboard is detected.
[Disabled] Disables this function.
Hot Key [Ctrl+Space]
Selects a combination of keys as a hot key to wake the system. This item appears when you set the Resume From S3/S4/S5 by PS/2 Keyboard to Hot Key.

Secure Erase+
Enables or disables Secure Erase+ function. Secure Erase+ is the best way to effectively wipe all data from a SSD. Please note that data of SSD will be erased after enabling Secure Erase+.

Intel (R) Ethernet Connection I219-V
Shows driver information and configuration of the ethernet controller parameter. This item will appear when Network Stack is enabled.

Boot
Sets the sequence of system boot devices.

Full Screen Logo Display [Enabled]
Enables or disables to show the full screen logo while system POST.
[Enabled] Shows the logo in full screen.
[Disabled] Shows the POST messages.

GO2BIOS [Disabled]
Allows system to enter BIOS setup directly by pressing the Power button for 4 sec pon bootup.
[Enabled] The system boots straight to the BIOS setup by long pressing the power button about 4 seconds when the system is off.
[Disabled] Disables this function.

Bootup NumLock State [On]
Select the keyboard NumLock state upon bootup.

Info Block effect [Unlock]
Sets the state of Help information block.
[Unlock] Sliding effect.
[Lock] Fix the Help information block on the screen.

Boot Mode Select [LEGACY+UEFI]
Sets the system boot mode from legacy or UEFI architecture depending on OS installation requirement. This item will become un-selectable and will be configured automatically by BIOS when Windows 10 WHQL Support is enabled.
[UEFI] Enables UEFI BIOS boot mode support only.
[LEGACY+UEFI] Enables both Legacy BIOS boot mode and UEFI BIOS boot mode.

FIXED BOOT ORDER Priorities
Sets device priority for system boot.

Boot Option Priorities
These items are used to prioritize the installed boot devices.
Security

▸ Administrator Password
Sets administrator password for system security. User has full rights to change the BIOS items with administrator password. After setting the administrator password, the state of this item will show “Installed”.

▸ User Password
Sets User Password for system security. User has limited rights to change the BIOS items with user password. This item will be available when administrator password is set. After setting the user password, the state of this item will show “Installed”.

▸ Password Check [Setup]
Selects a condition that will request the password.

[Setup] A password will be requested for entering the BIOS Setup.
[Boot] A password will be requested for booting the system.

▸ Password Clear [Enabled]
Enables or disables the clear CMOS behavior to clear a set password.

[Enabled] The password will be erased after clear CMOS.
[Disabled] The password will always be kept.

⚠️ Important
When selecting the Administrator / User Password items, a password box will appear on the screen. Type the password then press <Enter>. The password typed now will replace any previous set password from CMOS memory. You will be prompted to confirm the password. You may also press <Esc> to abort the selection.

To clear a set password, press <Enter> when you are prompted to enter a new password. A message will confirm the password is being disabled. Once the password is disabled, you can enter the setup and OS without authorization.

▸ Trusted Computing
Sets TPM (Trusted Platform Module) function.

▸ Security Device Support [Disabled]
Enables or disables the TPM function to build the endorsement key for accessing the system.

▸ Chassis Intrusion Configuration
Press <Enter> to enter the sub-menu.

▸ Chassis Intrusion [Disabled]
Enables or disables recording messages when the chassis is opened. This function is ready for the chassis equips a chassis intrusion switch.

[Enabled] Once the chassis is opened, the system will record and issue a warning message.
[Reset] Clear the warning message. After clearing the message, please return to Enabled or Disabled.
[Disabled] Disables this function.
Save & Exit

▶ Discard Changes and Exit
Exit BIOS setup without saving any change.

▶ Save Changes and Reboot
Save all changes and reboot the system.

▶ Save Changes
Save current changes.

▶ Discard Changes
Discard all changes and restore to the previous values.

▶ Restore Defaults
Restore or load all default values.

▶ Boot Override
The installed bootable devices will appear on this menu, you can select one of them to be the boot device.
# Overclocking

Overclocking your PC manually is only recommended for advanced users.

Overclocking is not guaranteed, and if done improperly, it could void your warranty or severely damage your hardware.

If you are unfamiliar with overclocking, we advise you to use OC GENIE 4 function for easy overclocking.

## OC Explore Mode [Normal]
Enables or disables to show the normal or expert version of OC settings.

- **[Normal]** Provides the regular OC settings in BIOS setup.
- **[Expert]** Provides the advanced OC settings for OC expert to configure in BIOS setup.

Note: We use * as the symbol for the OC settings of Expert mode.

## CPU Ratio [Auto]
Sets the CPU ratio that is used to determine CPU clock speed. This item only appears when CPU Ratio Apply Mode set to All Core.

## Adjusted CPU Frequency
Shows the adjusted CPU frequency. Read-only.

## CPU Ratio Offset When Running AVX [Auto]
Sets a offset value to lower the CPU core ratio. It could be helpful for heat dissipation when running AVX instruction set. If set to Auto, BIOS will configure this setting automatically. This item appears when the installed CPU supports this function.

## Ring Ratio [Auto]
Sets the ring ratio. The valid value range depends on the installed CPU.

## Adjusted Ring Frequency
Shows the adjusted Ring frequency. Read-only.
GT Ratio [Auto]
Sets the integrated graphics ratio. The valid value range depends on the installed CPU.

Adjusted GT Frequency
Shows the adjusted integrated graphics frequency. Read-only.

Misc Setting*
Press Enter, + or - key to open or close the following 3 items related to CPU features.

EIST [Enabled]*
Enables or disables the Enhanced Intel® SpeedStep Technology.
[Enabled] Enables the EIST to adjust CPU voltage and core frequency dynamically. It can decrease average power consumption and average heat production.
[Disabled] Disables EIST.

Intel Turbo Boost [Enabled]*
Enables or disables the Intel® Turbo Boost. This item appears when the installed CPU supports this function.
[Enabled] Enables this function to boost CPU performance automatically above rated specifications when system request the highest performance state.
[Disabled] Disables this function.

Enhanced Turbo [Auto]*
Enables or disables Enhanced Turbo function for all CPU cores to boost CPU performance. This item appears when the installed CPU supports this function.
[Auto] This setting will be configured automatically by BIOS.
[Enabled] All CPU cores would be increased to maximum turbo ratio.
[Disabled] Disables this function.

CPU Base Clock (MHz) [Default]
Sets the CPU Base clock. You may overclock the CPU by adjusting this value. Please note that overclocking behavior and stability is not guaranteed. This item appears when a CPU that support this function is installed.

Extreme Memory Profile (X.M.P.) [Disabled]
X.M.P. (Extreme Memory Profile) is the overclocking technology by memory module. Please enable XMP or select a profile of memory module for overclocking the memory. This item will be available when the memory modules that support X.M.P. is installed.

DRAM Frequency [Auto]
Sets the DRAM frequency. Please note the overclocking behavior is not guaranteed.

Adjusted DRAM Frequency
Shows the adjusted DRAM frequency. Read-only.

Memory Try It ! [Disabled]
It improve memory compatibility or performance by choosing optimized memory preset.
Advanced DRAM Configuration
Press Enter to enter the sub-menu. User can set the memory timing for each/all memory channel. The system may become un-stable or un-bootable after changing memory timing. If it occurs, please clear the CMOS data and restore the default settings. (Refer to the Clear CMOS jumper/button section to clear the CMOS data, and enter the BIOS to load the default settings.)

Memory Fast Boot [Auto]*
Enables or disables the initiation and training for memory every booting.

[Auto] The setting will be configured automatically by BIOS.
[Enabled] System will completely keep the archives of first initiation and training for memory. So the memory will not be initialed and trained when booting to accelerate the system booting time.
[Disabled] The memory will be initialed and trained every booting.

DigitALL Power
Press Enter to enter the sub-menu. In the sub-menu, you can setup some protecting conditions about voltage/current/temperature for CPU.

CPU Voltages control [Auto]
These options allows you to set the voltages related to CPU. If set to Auto, BIOS will set these voltages automatically or you can set it manually.

DRAM Voltages control [Auto]
These options allows you to set the voltages related to memory. If set to Auto, BIOS will set these voltages automatically or you can set it manually.

PCH Voltages control [Auto]
These options allow you to set the voltages related to PCH. If set to Auto, BIOS will set these voltages automatically or you can set it manually.

CPU Memory Changed Detect [Enabled]*
Enables or disables the system to issue a warning message during boot when the CPU or memory has been replaced.

[Enabled] The system will issue a warning message during boot and then you have to load the default settings for new devices.
[Disabled] Disables this function and keeps the current BIOS settings.

CPU Specifications
Press Enter to enter the sub-menu. This sub-menu displays the information of installed CPU. You can also access this information menu at any time by pressing [F4]. Read only.

CPU Technology Support
Press Enter to enter the sub-menu. The sub-menu shows the key features of installed CPU. Read only.
► MEMORY-Z
Press Enter to enter the sub-menu. This sub-menu displays all the settings and timings of installed memory. You can also access this information menu at any time by pressing [F5].

► DIMMA1/A2/B1/B2 Memory SPD
Press Enter to enter the sub-menu. The sub-menu displays the information of installed memory. Read only.

► CPU Features
Press Enter to enter the sub-menu.

► Hyper-Threading [Enabled]
Intel Hyper-Threading technology treats the multi cores inside the processor as multi logical processors that can execute instructions simultaneously. In this way, the system performance is highly improved. This item appears when the installed CPU supports this technology.
[Enable] Enables Intel Hyper-Threading technology.
[Disabled] Disables this item if the system does not support HT function.

► Active Processor Cores Control [All]
Allows you to select the number of active CPU cores.

► Limit CPUID Maximum [Disabled]
Enables or disables the extended CPUID value.
[Enabled] BIOS limits the maximum CPUID input value to circumvent boot problems with older operating system that do not support the processor with extended CPUID value.
[Disabled] Use the actual maximum CPUID input value.

► Intel Virtualization Tech [Enabled]
Enables or disables Intel Virtualization technology.
[Enabled] Enables Intel Virtualization technology and allows a platform to run multiple operating systems in independent partitions. The system can function as multiple systems virtually.
[Disabled] Disables this function.

► Intel VT-D Tech [Disabled]
Enables or disables Intel VT-D (Intel Virtualization for Directed I/O) technology.

► Hardware Prefetcher [Enabled]
Enables or disables the hardware prefetcher (MLC Streamer prefetcher).
[Enabled] Allows the hardware prefetcher to automatically pre-fetch data and instructions into L2 cache from memory for tuning the CPU performance.
[Disabled] Disables the hardware prefetcher.
► Adjacent Cache Line Prefetch [Enabled]
Enables or disables the CPU hardware prefetcher (MLC Spatial prefetcher).
[Enabled] Enables adjacent cache line prefetching for reducing the cache latency time and tuning the performance to the specific application.
[Disabled] Enables the requested cache line only.

► CPU AES Instructions [Enabled]
Enables or disables the CPU AES (Advanced Encryption Standard-New Instructions) support. This item appears when a CPU supports this function.

► Intel Adaptive Thermal Monitor [Enabled]
Enables or disables the Intel adaptive thermal monitor function to protect the CPU from overheating.
[Enabled] Throttles down the CPU core clock speed when the CPU is over the adaptive temperature.
[Disabled] Disables this function.

► Intel C-State [Auto]
Enables or disables the Intel C-state. C-state is a processor power management technology defined by ACPI.
[Auto] This setting will be configured automatically by BIOS.
[Enabled] Detects the idle state of system and reduce CPU power consumption accordingly.
[Disabled] Disable this function.

► C1E Support [Disabled]
Enables or disables the C1E function for power-saving in halt state. This item appears when Intel C-State is enabled.
[Enabled] Enables C1E function to reduce the CPU frequency and voltage for power-saving in halt state.
[Enabled] Disables this function.

► Package C State limit [Auto]
This item allows you to select a CPU C-state level for power-saving when system is idle. The options of C-state depend on the installed CPU. This item appears when Intel C-State is enabled.

► CFG Lock [Enabled]
Lock or un-lock the MSR 0xE2[15], CFG lock bit.
[Enabled] Locks the CFG lock bit.
[Disabled] Un-locks the CFG lock bit.

► EIST [Enabled]
Enables or disables the Enhanced Intel® SpeedStep Technology. This item will appear when OC Explore Mode is set to Normal.
[Enabled] Enables the EIST to adjust CPU voltage and core frequency dynamically. It can decrease average power consumption and average heat production.
[Disabled] Disables EIST.
• **Intel Turbo Boost [Enabled]**
  Enables or disables the Intel® Turbo Boost. This item is for **Normal mode** and appears when a CPU that support Turbo Boost is installed.

  **[Enabled]** Enables this function to boost CPU performance automatically over specification when system request the highest performance state.

  **[Disabled]** Disables this function.

• **Long Duration Power Limit (W) [Auto]**
  Sets the long duration TDP power limit for CPU in Turbo Boost mode.

• **Long Duration Maintained (s) [Auto]**
  Sets the maintaining time for Long duration power Limit(W).

• **Short Duration Power Limit (W) [Auto]**
  Sets the short duration TDP power limit for CPU in Turbo Boost mode.

• **CPU Current Limit (A) [Auto]**
  Sets maximum current limit of CPU package in Turbo Boost mode. When the current is over the specified value, the CPU will automatically reduce the core frequency for reducing the current.

• **FCLK Frequency [Auto]**
  Sets FCLK frequency. Lower FCLK frequency may help you to set higher base clock frequency.

• **DMI Link Speed [Auto]**
  Sets DMI speed.

• **SW Guard Extensions (SGX) [Software Control]**
  Enables or disables Intel SGX.

• **Intel Speed Shift Technology [Auto]**
  Enables or disables Intel Speed Shift Technology. It can optimize energy efficiency. This item is only available with the CPU that supports this technology.
**M-FLASH**

M-FLASH provides the way to update BIOS with a USB flash drive. Please download the latest BIOS file that matches your motherboard model from MSI website, save the BIOS file into your USB flash drive. And then follow the steps below to update BIOS.

1. Insert the USB flash drive that contains the update file into the computer.
2. Click on **M-FLASH** tab, a demand message will be prompted. Click on **Yes** to reboot and enter the flash mode.

3. The system will enter the flash mode and a file selection menu will appear after rebooting.

4. Select a BIOS file to perform the BIOS update process.

5. After the flashing process is 100% completed, the system will reboot automatically.
OC PROFILE

▶ Overclocking Profile 1/ 2/ 3/ 4/ 5/ 6
Overclocking Profile 1/ 2/ 3/ 4/ 5/ 6 management. Press <Enter> to enter the sub-menu.

▶ Set Name for Overclocking Profile 1/ 2/ 3/ 4/ 5/ 6
Name the current overclocking profile.

▶ Save Overclocking Profile 1/ 2/ 3/ 4/ 5/ 6
Save the current overclocking profile.

▶ Load Overclocking Profile 1/ 2/ 3/ 4/ 5/ 6
Load the current overclocking profile.

▶ Clear Overclocking Profile 1/ 2/ 3/ 4/ 5/ 6
Clear the current overclocking profile.

▶ OC Profile Load from ROM
Load OC profile from BIOS ROM.

▶ OC Profile Save to USB
Save OC profile to the USB flash drive. The USB flash drive should be FAT/ FAT32 format only.

▶ OC Profile Load from USB
Load OC profile from the USB flash drive. The USB flash drive should be FAT/ FAT32 format only.
HARDWARE MONITOR

- **Temperature & Speed**
  Shows the current CPU temperature, system temperature and fans' speeds.

- **Fan Manage**
  - **PWM** - allows you to select the PWM mode for fan operation.
  - **DC** - allows you to select the DC mode for fan operation.
  - **Fan step up/ down time** - allows you to set the period of fan step up/ down.
  - **Smart Fan Mode field** - allows you to drag the gradient points to configure the fan target values for Smart Fan mode. Smart Fan can control the fan speed automatically depending on the CPU temperature to keep it within a specific range. If the current CPU temperature reaches to the target value, the Smart Fan function will be activated.

  **Important**
  - The changing will achieve after you save the changes and reboot the system.
  - Make sure fans are working properly after switching the PWM/ DC mode.

- **Settings Buttons**
  - **All Full Speed** - configures all fans to run at full operating speed.
  - **All Set Default** - configures all fans to run at default operating speed.
  - **All Set Cancel** - discards current changes and restores previous operating fan speeds.

- **Temperature/ Voltage display**
  Shows CPU/ system temperature and the current voltages of CPU, system and memory.
RAID Configuration

Below are the different types of a RAID.

**RAID 0** breaks the data into blocks which are written to separate hard drives. Spreading the hard drive I/O load across independent channels greatly improves I/O performance.

**RAID 1** provides data redundancy by mirroring data between the hard drives and provides enhanced read performance.

**RAID 5** provides data striping at the byte level and also stripe error correction information. This results in excellent performance and good fault tolerance.

**RAID 10** uses four hard drives to create a combination of RAID 0 and 1 by forming a RAID 0 array from two RAID 1 arrays.

⚠️ Important

All the information/volumes/pictures listed in your system might differ from the illustrations in this appendix.

Enabling Intel® Rapid Storage Technology

In Legacy mode, we can change the **AHCI mode** to **RAID mode** and disable the **Fast Boot** then press **Ctrl + I** during the POST to enter the Intel Rapid Storage Technology Legacy mode. However, most newer version of operating systems support UEFI and the Intel Rapid Storage Technology UEFI mode can still run when the Fast Boot is enabled. Therefore we recommend that you use the UEFI BIOS for simple and advanced operations. The following description is based on the UEFI mode.

To enter the Intel(R) Rapid Storage Technology menu

1. Power on and press **Delete** key to enter BIOS Setup menu.
2. Press **F7** to switch to Advanced mode from EZ mode.
3. Go to **BIOS > SETTINGS > Advanced > Integrated Peripherals > SATA Mode** and change setting to **RAID/ Optane Mode**.
4. Go to **BIOS > SETTINGS > Advanced > Windows OS Configuration > Windows 10 WHQL Support** and change setting to **Enabled**.
5. Skip this step If you are only using SATA storage devices. If you are using NVMe PCIe SSDs, go to **BIOS > SETTINGS > Advanced > Integrated Peripherals > M2_X PCIe Storage Remapping** and change setting to **Enabled**.
6. Press **F10** to save configuration and exit, and then reboot and press **Delete** key to enter BIOS Setup menu.

7. Go to **BIOS > SETTING > Advanced > Intel(R) Rapid Storage Technology** sub-menu.

Creating RAID Volume

1. As previously mentioned, enable Intel(R) Rapid Storage Technology.

2. Enter **Create RAID Volume** screen. The following screen appears:

3. Specify a **Name** for RAID volume.

4. Select the **RAID Level** best suited to your usage model in RAID Level.

5. In the **Select Disks** field, press **Space** key or press **Enter** key and use the ↑ ↓ arrow keys to select the option X to select the disks you want to create for the RAID volume.

6. Select the **Strip Size** for the RAID array. The available values range from 4KB to 128 KB in power of 2 increments. The strip size should be chosen based on the planned drive usage. Here are some typical values: RAID0 -128KB / RAID10 - 64KB / RAID5 - 64KB.

7. Select the capacity of the volume in the **Capacity (MB)** field. The default value is the maximum volume capacity of the selected disks.

8. Go to the **Create Volume** field and press **Enter** to create the RAID volume. Upon completion you are returned to the **Intel(R) Rapid Storage Technology** menu.
Removing a RAID Volume

Here you can delete the RAID volume, but please be noted that all data on RAID drives will be lost.

⚠️ Important

If your system currently boots to RAID and you delete the RAID volume, your system will become unbootable.

1. Go to BIOS > SETTING > Advanced > Intel(R) Rapid Storage Technology.

2. Select the RAID volume from the Intel(R) Rapid Storage Technology screen to enter the RAID VOLUME INFO screen.

   ![RAID VOLUME INFO screen](image1)

   3. Select the Delete item and press Enter key to delete the selected RAID volume. The following screen appears:

   ![Delete RAID Volume screen](image2)

   4. Select the Yes item and press Enter key to accept the volume deletion.
Resetting Disks to Non-RAID

1. Go to BIOS > SETTING > Advanced > Intel(R) Rapid Storage Technology.

2. Select the RAID volume from the Intel(R) Rapid Storage Technology screen to enter the RAID VOLUME INFO screen.

3. Select the disk and press Enter to enter PHYSICAL DISK INFO screen.

4. Select Reset to non-RAID item and press Enter to delete the RAID volume and remove any RAID structures from the drives. The following screen appears:

5. Select the Yes item and press Enter key to accept the disk resetting.

⚠️ Important

- You will lose all data on the RAID drives and any internal RAID structures when you perform this operation.
- Possible reasons to Reset Disks to Non-RAID could include issues such as incompatible RAID configurations or a failed volume or failed disk.
Rebuilding RAID Array

A RAID 1, RAID 5 or RAID 10 volume is reported as Degraded when one of its hard drive members fails or is temporarily disconnected, and data mirroring is lost. As a result, the system can only utilize the remaining functional hard drive member. To re-establish data mirroring and restore data redundancy, refer to the procedure below that corresponds to the current situation.

1. Power off.
2. Replace the failed hard drive with a new one that is of equal or greater capacity.
3. Reboot the system and go to BIOS > SETTING > Advanced > Intel(R) Rapid Storage Technology.

![Image of Intel(R) Rapid Storage Technology interface]

4. Select the Degraded RAID volume from the Intel(R) Rapid Storage Technology screen to enter the RAID VOLUME INFO screen.

![Image of RAID Volume Info screen]

5. Select the Rebuild item and press Enter key to rebuild the new hard drive.
Installing RAID Driver

New Operating System Installation

The following details the installation of the drivers while installing Windows 10 x64 bit Editions or newer operating system.

1. During the operating system installation, after selecting the location to install Windows click on **Load driver** button to install a third party RAID driver.

2. When prompted, insert the USB flash drive with **Intel RAID Drivers** and then click **Browse**.
   - To make an **Intel RAID Drivers** USB flash drive. Insert the MSI Driver Disc into the optical drive. Copy all the contents in `\Storage\Intel\16.x\f6\py-x64`

3. Navigate to the directory containing the saved Intel RAID drivers, then click **OK**.

4. Select the *(iaStorAC.inf)* driver, click **Next**.

5. You have successfully installed the RAID driver, and Windows setup should continue.

6. Leave the disk/ USB drive in the computer until the system reboots itself. Windows setup will need to copy the files after the RAID volume is formatted, and Windows setup starts copying files.

Installing Intel® Rapid Storage Technology Software

1. As previously mentioned, enable Intel(R) Rapid Storage Technology in BIOS.

2. Insert the MSI Driver Disc into the optical drive.

3. Click the **Select to choose what happens with this disc** pop-up notification, then select **Run DVDSetup.exe** to open the installer. If you turn off the AutoPlay feature from the Windows Control Panel, you can still manually execute the **DVDSetup.exe** from the root path of the MSI Driver Disc.

4. Under the **Drivers/Software** tab, check the **Intel RAID Drivers** check-box.

5. Click the **Install** button.

6. When prompt you to restart, click **OK** button to finish.

7. Restart your computer and enter the Windows operating system.

8. Double-click the **Intel® Rapid Storage Technology** icon to open the Intel® Rapid Storage Technology software.
Intel® Optane™ Memory Configuration

Intel® Optane™ memory can accelerate the Windows 10 64bit operating system. This section describes how to install and remove the Intel® Optane™ memory.

System Requirements

- Intel® Optane™ memory ready MSI® motherboards
- Supported 8th Gen, or later, Intel® Core™ - i Processor
- System BIOS that supports the Intel® Rapid Storage Technology (Intel® RST) 16 or later driver
- Operating system: Windows 10 64 bit (UEFI mode).
- Intel® Optane™ Memory Module

Installing the Intel® Optane™ memory

Install the Intel® Rapid Storage Technology 16.

1. Update BIOS (refer to the Updating BIOS section).
2. Install the Intel® Optane™ memory module.
   - Power off the system.
   - Refer to the Specifications for location to install your Intel® Optane™ memory module.
   - Install the Intel® Optane™ memory module into the M.2 slot.
3. Enable M.2/Optane Genie
   - Power on and press Delete key to enter BIOS Setup menu.
   - Enable M.2/Optane Genie by clicking the M.2/Optane Genie item.
   - Click Ok in the dialog.
   - Press F10 to save configuration and exit.
4. Install the Intel® Rapid Storage Technology
   - Reboot to operating system.
   - Insert the MSI Driver Disc into the optical drive.
   - Click the Select to choose what happens with this disc pop-up notification, then select Run DVDSsetup.exe to open the installer. If you turn off the AutoPlay feature from the Windows Control Panel, you can still manually execute the DVDSsetup.exe from the root path of the MSI Driver Disc.
   - Under the Drivers/Software tab, check the Intel RAID Drivers check-box.
   - Click the Install button.
   - When prompt you to restart, click OK button to finish.
   - Reboot System.
5. Enable Intel® Optane™ Memory.
   - Run the Intel® Rapid Storage Technology software.
   - Click Intel® Optane™ Memory tab and click Enable.
   - Click Yes in the dialog.

6. Reboot System.

**WARNING**

Once you enable Intel® Optane™ memory, in order to prevent seriously damage your operating system, please follow the cautions listed below.

- **DO NOT** set the SATA mode back to AHCI in BIOS.
- **DO NOT** revert back to older version of the BIOS.
- **DO NOT** remove the Intel® Optane™ memory module.
- **DO NOT** replace the CPU that is not supported by Intel® Optane™ Memory.
Removing the Intel® Optane™ memory

If you no longer want to use Intel® Optane™ memory, you have to disable the Intel® Optane™ memory before removing the Intel® Optane™ memory module to avoid operating system damage. Please follow the steps below to remove the Intel® Optane™ memory.

1. Disable Intel® Optane™ Memory.
   - Disable Intel® Optane™ Memory via the Intel® Optane™ memory application (Intel® Rapid Storage Technology).
   - Click Yes in the dialog.
   - Reboot System.

2. Disable M.2/Optane Genie
   - Press Delete key to enter BIOS Setup menu during POST.
   - Disable M.2/Optane Genie by clicking M.2/Optane Genie item.
   - Click Ok in the dialog.
   - Press F10 to save configuration and exit.

3. Remove the Intel® Optane™ memory module.
   - Power off the system.
   - Remove the Intel® Optane™ memory module.
Troubleshooting

Before sending the motherboard for RMA repair, try to go over troubleshooting guide first to see if you got similar symptoms as mentioned below.

The power is not on.
- Connect the AC power cord to an electrical outlet securely.
- Check if all ATX power connectors like ATX_PWR1, CPU_PWR1 are connected from the power supply to the motherboard?
- Some power supply units have a power button on the rear side, make sure the button is turned on.
- Check if the power switch cable is connected to JFP1 pin header properly.
- Verify the Clear CMOS jumper JBAT1 is set to Keep DATA.
- Test with another known working power supply of equal or greater wattage.

The power is on, but no signal to monitor
- Connect the monitor power cord to an electrical outlet securely.
- Make sure the monitor is turned on.
- Select different inputs on the monitor.
- If 3 long beeps are heard, remove all memory modules and try to install only one memory module in the DIMMA2 slot first and then restart the computer.
- If 1 long 2 short beeps are heard, remove and reinstall the graphics card and then restart the computer.
- Test with another known working graphics card.

The computer does not boot after updating the BIOS
- Clear the CMOS.
- Use the secondary BIOS to bootup the system (Only for motherboard with Dual BIOS)

Lost BIOS password
- Clear the CMOS, but that will cause you to lose all customized settings in the BIOS.

There is no audio
- Adjust the volume.
- Connect the speakers/headphones to audio ports on the motherboard rear IO panel.
- Remove secondary speakers/ headphones, HDMI cables, USB audio devices.
- Test with another known working speaker or headphone.

There is no network
- Make sure the network chipset driver has been installed.
- Verify if the network cable is properly connected and make sure the LAN port LEDs are properly illuminated.
- Verify your TCP/IP settings.
- Restart or reset your router.
- Test with another known working LAN cable.

The USB device is not working
- Make sure your USB drive driver has been installed.
- Verify if USB device is listed in Windows® Device Manager.
- Connect the USB device to other USB port on the motherboard rear IO panel.
**FCC Compliance Statement**

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: [1] This device may not cause harmful interference, and [2] this device must accept any interference received, including interference that may cause undesired operation.

**CE Conformity**

Products bearing the CE marking comply with one or more of the following EU Directives as may be applicable:

- EMC Directive 2014/30/EU; RoHS Directive 2011/65/EU.

Compliance with these directives is assessed using applicable European Harmonized Standards. The point of contact for regulatory matters is MSI, MSI-NL Eindhoven 5706 5692 ER Son.

**Battery Information**

European Union: Batteries, battery packs, and accumulators should not be disposed of as unsorted household waste. Please use the public collection system to return, recycle, or treat them in compliance with the local regulations.

Taiwan: 廢電池請回收
For better environmental protection, waste batteries should be collected separately for recycling or special disposal.

California, USA: The button cell battery may contain perchlorate material and requires special handling when recycled or disposed of in California.

For further information please visit: http://www.dtsc.ca.gov/hazardouswaste/perchlorate/

**CAUTION**: There is a risk of explosion, if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer.

**Chemical Substances Information**

In compliance with chemical substances regulations, such as the EU REACH Regulation (Regulation EC No. 1907/2006 of the European Parliament and the Council), MSI provides the information of chemical substances in products at:

**Environmental Policy**

- The product has been designed to enable proper reuse of parts and recycling and should not be thrown away at its end of life.
- Users should contact the local authorized point of collection for recycling and disposing of their end-of-life products.
- Visit the MSI website and locate a nearby distributor for further recycling information.
- Users may also reach us at gpcontdev@msi.com for information regarding proper Disposal, Take-back, Recycling, and Disassembly of MSI products.

**WEEE (Waste Electrical and Electronic Equipment) Statement**

ENGLISH

To protect the global environment and as an environmentalist, MSI must remind you that...
Under the European Union ("EU") Directive on Waste Electrical and Electronic Equipment, Directive 2002/96/EC, which takes effect on August 13, 2005, products of "electrical and electronic equipment" cannot be discarded as municipal wastes anymore, and manufacturers of covered electronic equipment will be obligated to take back such products at the end of their useful life. MSI will comply with the product take back requirements at the end of life of MSI-branded products that are sold into the EU. You can return these products to local collection points.

DEUTSCH
Hinweis von MSI zur Erhaltung und Schutz unserer Umwelt

FRANÇAIS
En tant qu’écologiste et afin de protéger l’environnement, MSI tient à rappeler ceci...
Au sujet de la directive européenne (EU) relative aux déchets des équipements électriques et électroniques, directive 2002/96/EC, prenant effet le 13 août 2005, que les produits électriques et électroniques ne peuvent être déposés dans les décharges ou tout simplement mis à la poubelle. Les fabricants de ces équipements seront obligés de récupérer certains produits en fin de vie. MSI prendra en compte cette exigence relative au retour des produits en fin de vie au sein de la communauté européenne. Par conséquent vous pouvez retourner localement ces matériels dans les points de collecte.

POLSKI
Kompania MSI przedsięwzięła aktywne działania po schowki okolicznej ścieżki, dlatego napominałbym, że....
W związku z dyrektywą Europejskiego Sojuszu (EC) dotyczącą zatorzenia przemyślnego elektrowni polityki fizycznej, a także elektronicznych urządzeń (Dyrektiva 2002/96/EC), wchodzącej w życie 13 sierpnia 2005 r., "produkty oraz wyposażenie elektryczne i elektroniczne" nie mogą być traktowane jako śmieci komunalne, tak więc producenci tych produktów będą zobowiązani do odbierania ich w momencie gdy produkt jest wycofany z użycia. MSI wypełni wymagania UE, przyjmując produkty (sprzedawane na terenie Unii Europejskiej) wycofane z użycia. Produkty MSI będzie można zwracać w wyznaczonych punktach zbiorczych.

SRPSKI
Da bi zaštitili prirodnu sredinu, i kao preduzeće koje vodi računa o okolini i prirodnoj sredini, MSI mora da vas podesti da...
Po Direktivi Evropske unije ("EU") o odbačenim elektronskom i električnom opremi, Direktiva 2002/96/EC, koja stupa na snagu od 13. Avgusta 2005, proizvodi koji spadaju pod "elektronsku i električnu opremu" ne mogu više biti odbačeni kao običan otpad i proizvođači ove opreme biće prinudeni da uzmaju natrag ove proizvode na kraju njihovog uobičajenog veka trajanja. MSI će poštovati zahtev o preuzimanju ovakvih proizvoda kojima je istekao vek trajanja, koji imaju MSI oznaku i koji su prodani u EU. Ove proizvode može vratiti na lokalnim mestima za prikupljanje.
Japanese RoHS

This product complies with the "India E-waste Management and Handling) Rule 2011" and prohibits use of lead, mercury, hexavalent chromium, polybrominated biphenyls or polybrominated diphenyl ethers in concentrations exceeding 0.1 weight % and 0.01 weight % for cadmium, except for the exemptions set in Schedule 2 of the Rule.

Wireless Radio Use

This device is restricted to indoor use when operating in the 2.4GHz, 5GHz frequency band.

NCC無線設備警告聲明

工作頻率2.4GHz, 5GHz該頻段限於室內使用。

Products with radio functionality (EMF)

This product incorporates a radio transmitting and receiving device. For computers in normal use, a separation distance of 20 cm ensures that radio frequency exposure levels comply with EU requirements. Products designed to be operated at closer proximities, such as tablet computers, comply with applicable EU requirements in typical operating positions. Products can be operated without maintaining a separation distance unless otherwise indicated in instructions specific to the product.

Radio frequency bands and maximum power levels

Features : 802.11 a/b/g/n/ac, BT
Frequency Range : 2.4GHz, 5GHz
Modulation : FHSS, DSSS, OFDM
Power Output : -10, 20, 23
Channel Band Width : 1, 5, 20, 40, 80MHz

Restrictions for products with radio functionality

CAUTION: IEEE 802.11x wireless LAN with 5.15-5.35 GHz frequency band is restricted for indoor use only in all European Union member states, EFTA (Iceland, Norway, Liechtenstein), and most other European countries (e.g., Switzerland, Turkey, Republic of Serbia). Using this WLAN application outdoors might lead to interference issues with existing radio services.
