

ZERO-G iFX Games

The **iFX Series** is Zero-G's range of royalty-free sample CD-ROMs designed specifically for the internet, multimedia and games industry. They feature unique

and highly usable sounds to make your new media projects come alive! **iFX 'Games'** is the third release in the series, and features highly structured, specifically recorded and designed sound effects for games developers.

“Rated: 9/10... The shopping list here is so big, it could take a whole page to describe it, but you'll certainly find something for your own specific need... The sounds are always effective... You can only come to the conclusion that this library is very affordable and very useful for a wide range of multimedia applications” (INTERFACE magazine)

“This is remix heaven... this CD provides a ton of source material that's a gold mine for creative types, as well as a good selection of ready-to-go sounds.” (EQ magazine, USA).

Designed specifically for games development and implementation, these individually cut WAV sounds can either be dragged directly into sound editing software and manipulated, or imported directly into the game code. This is a collection of sounds that are constantly needed again and again covering the basic sound sets of atmos, combat, footsteps, foley and many more within games development, whether for FMV movie spot FX or in-game interaction, and are organised into simple to navigate folder structures. All sounds are ‘dry’ so that real-time environmental audio effects can be added as desired.

iFX GAMES is the perfect sound solution for games development whether for next generation consoles or on-line.
